Clone distribution: MCC clone distribution information can be foun through the I.M.A.G. Connertium/LIML str. http://lamge.llnl.gv. Bartis: IRM Flate: 141 Nov: p Column: 19
This clone was selected for full lamghs sequencing because it passed the following selection criteria: matched sman, gi: 20899251
Location/Dealliters Lound

organism="Homo sapiens"

AAA46696

AAA46696 standard, DNA; 609 ВP

AAA46696;

25-SEP-2000 (first entry)

DNA encoding a human growth hormone (hGH).

Rimanı growth hormone; höd; inhibitor, nuclear factor-keppaB, NF-kappaB, maliti-drug resistance gene, malignant hempathy, solid tumour; malignant blood disease; leukaemis; lymphoms, golid cancer; ds.

Homo sapiens

/*tag= Location/Qualifiers 1. .609

/product= "growth hormone"

W0200030587-A2.

24-NOV-1999; 02-JUN-2000. 99WO-FR002897.

25-NOV-1998; 98FR-00014858

(CNRS) CENT NAT RECH SCI

Hirsch F, Haeffner A;

WPI; 2000-399901/34. P-PSDB, AAY93637

Treatment of hematological or solid tumors using an inhibitor of the artesian of nuclear factor-kapaB, particularly to prevent development of resistance to chemotherapeutics.

Claim 4; Page 26-27; 30pp; French

AAN60678

The present sequence encodes a human growth hormone (hGH). The human

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            coverh hormon protein is used as an inhibitor of the activation of motion factor implies (We hopped). The inhibitor inhibits activation of propaga, and thus transcription of the Me without a regulatory region. The inhibitors are used to profine parameterized which may used in the transcription of maintained by profine parameterized which may used in the transcent of maintaine homosphy or maid uncours. The inhibitors are used contained to profine parameterized with may used in the transcent of maintaine homosphy or maid uncours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention described a method of detecting variation in growth 1 (GHI), and therefore GH dystimction in an individual. The method comprises comparing the nucleotide sequence of GHI gene obtained test sample with a standard human GHI gene sequence, in order to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Detecting growth hormone variants (GH1), useful in screening patients growth hormone irregularities, comprises comparing the nucleotide sequence of a GH1 gene from a test sample with that of a standard
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Disclosure; Fig 7; 95pp; English
